

ISDN to SIP made easy

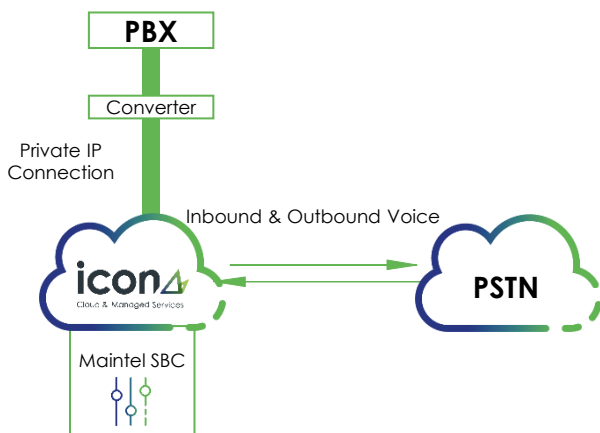

ISDN migration to ICON SIP

A Maintel service that make the transition from ISDN to SIP simple.

Enterprises are increasingly seeing the advantages that SIP has to offer. But not everyone is in a position to progress to a full IP telephony transformation to get access to those benefits.

Maintel's ISDN to SIP connector offers the perfect solution. We connect an ISDN to SIP conversion device to your traditional PBX and connect you privately via Maintel's centralised Session Border Controller, to the public telephone network.

You get the immediate benefits of SIP and can plan your IP telephony strategy at your own pace.

UK telephony switch off

- ✓ **Full UK withdrawal** – If you didn't already know the traditional UK telephony network is being retired, so ISDN will be withdrawn
- ✓ **December 2020** – full withdrawal is December 2025 and that may seem a long way off. But be aware, the ability to order new services progressively stops from December 2020
- ✓ **It's not optional** – you will need to take action. But put your mind at rest now by future proofing your estate, and you can develop your IP telephony strategy at your leisure.
- ✓ **Simple design** – just answer a few questions
- ✓ **Easy budgeting** – SIP elements priced on a per channel per month basis
- ✓ **Inclusive calls**
- ✓ **Minimal upfront costs** – financial savings with limited investment
- ✓ **Self Service** – optional online tools to manage your entire number estate

How does it work?

Maintel will connect your traditional PBX to our ICON SIP platform through private connections, not the internet, for a true business grade experience.

An ISDN to SIP conversion device terminates the private circuit and plugs into your PBX to convert ISDN to SIP.

As the conversion device is self configuring, Maintel will get your new SIP service up really quickly, meaning you start saving money right away.

Stepping stone

The beauty of the proposition is you get immediate benefits and can plan your migration to full IP telephony when it suits you. Crucially you protect yourself against the imminent closure of the PSTN/ISDN network.

Simple design
per channel pricing
minimal investment
make savings quickly!

Standard Bundle
