

Cyber Security Maturity Assessment

For those looking to benchmark their security posture

Your Risk Appetite?

Has your organisation clearly defined a risk appetite, approved at board level, for cyber security? How confident are you that you are managing your cyber security risks to remain within those bounds? Do you have a clear way to balance cyber security investment, maintain risk appetite and meet your stakeholder and regulatory compliance objectives?

Many organisations struggle to clearly articulate their cyber security risk position and align it to business objectives and budgets as there is often a disconnect around technology and business teams.

Getting a clear, unbiased view from within an organisation can be challenging for organisations of all sizes. Equally, from the security owner's perspective, demonstrating to the board and senior leadership that their approach to security is appropriate, or that there is a need for additional investment, can be a significant challenge.

The Maintel Cyber Security Maturity Assessment

Our assessment meets the needs of security and technology leaders and clearly communicates performance to the board.

As an independent, impartial and trusted team of experts, we can assess the cybersecurity control environment against business risk appetite and focus on observed real-world threats that impact you.

The assessment can be used as part of a business case for further investment, it can be used to prioritise your actions and investments and finally it can be utilised to lower your cyber insurance premiums and provide evidence to both internal and external stakeholders around your risk level.

Our approach

Our assessment approach, whilst standards driven, is matched to your needs and business goals.

No two assessments are the same

We can quickly triage high-level cyber risks – such as in a pre or post-acquisition scenario, to develop a rapid risk reduction programme.

We develop an understanding of your organisation

We work with you to understand your business objectives, appetite for risk, technology roadmap, critical business functions and supporting assets. This ensures that the project is focused on the risks that have the largest potential, operational impact and resonate with the board.

We calibrate the assessment using threat intelligence

By using our experience delivering managed security services and the observed, ongoing threats from our security operations centre (SOC) and threat intelligence teams (TI), we tailor our assessments to the actual threats facing you.

We provide actionable, sustainable, realistic recommendations

We have experience in security transformation, maturity assessments, and implementing and managing security on behalf of our clients. This gives us a unique position to provide clear, actionable steps that improve your threat readiness. Our recommendations also consider the importance of demonstrating to stakeholders that risk is remaining within appetite.

We are there to support throughout the journey

We can also produce a security roadmap to accompany the recommendations. This includes prioritisation of activities, estimates of resources and budget required to remediate, and rapid risk reduction activities. Our team has experience in working with clients throughout each stage of the maturity improvement process.
